

Our Facilities Management Committee proposes that we:

- complete the replacement of the Sanctuary roof and providing safe maintenance access to the upper level roof;
- improve the safety and appearance of the Wheeler Street side of the campus by removing invasive root trees, replacing sidewalks and asphalt, and providing landscaping that will not damage the replaced hard surfaces;
- improve the safety and energy efficiency of our facility by replacing the 60+ year old electrical distribution system, and the wiring throughout the older parts of the facility;
- increase energy efficiency and improve the appearance of the Sanctuary and other spaces by replacing existing lighting with low-energy LED lighting;
- renovate the main restrooms in the Administrative and Childcare wings.
